

COMP1234 Week 2 lab exercise

Make sure to create a **lab** folder under the comp1234 folder; create an **exercises** folder in the lab folder (lowercase without any spaces) and create a **wk02** folder in the exercise folder.

1. Use our template.html to create a standard HTML5 document named as **exercise02.html** and make sure the metadata in the head section includes the proper information: **description** = "Week 2 lab exercise", **author** (your name) , **keywords**. Also, fill in the **title** tag.

Follow the best practice (proper indentation and tidiness of the code, page layout...)

2. Create a heading 1 (h1) element that displays your school name.
3. Create three heading 2 (h2) elements to list your name, student ID and city.
4. Create a paragraph to display some info about the city.
 - a. Optional challenge: Can you include a small image of the city as part of your web page content? Hint: Use W3 schools to find out how to add an image.
5. Ensure the validation script is placed before the closing </body> tag.
<script src=https://my.gblearn.com/js/loadscript.js></script>
6. Ensure your code passes the HTML5 validation test by clicking on the HTML 5 icon on your page
7. Upload your file/s to your GBLearn hosting account

"public_html/comp1234/lab/exercises/wk02/"

Ensure your directory/file is named exactly as specified above (lowercase without any spaces).
