

Lab Exercise (week11) COMP 1234

- Save the file as exercise11.html
- save a javascript file called yourname.js
- Upload them to: my.gblearn.com under:
public_html/comp1234/lab/exercises/wk11

Create the web page using HTML5 and CSS.

1. On the page:
 - a. create an heading with your name and student id
 - b. create a sub-heading the says 'Total .'
2. Using javascript in an internal script:
 - a. create and name a variable to hold a string.
 - b. prompt (input) the user for their name and store the name in the variable from step a.
 - c. create 2 number variables, name the variables properly.
 - d. assign any number to each of the variables. Choose numbers you like.
 - e. assign the **sum** of the 2 *variables from step c.* to a variable called '**total**'.
 - f. use **document write** and **console.log** to display a message, the user's name and the 'total' variable on the current web page. e.g. "**NAME** your lucky number is **TOTAL**" where NAME and TOTAL are the values derived from the variables in steps b. and e.

Your Name & Student ID

Total:

Leo your lucky number is 18.
